If you'd like to leverage NET's dynamic types for consuming JSON, I recommend the JsonFx project which provides direct deserialization to dynamic objects.. NETParsing your JSON didn't work Please make sure it's valid Already did that? Please let me know so I can fix it.

Here are some examples you can try:Your JSON represents a JavaScript object graph, which is both dynamic and schema-less.. The advent of dynamic languages has made consuming JSON much easier, although in C# you will not enjoy the added benefit of compile-time checking and intellisense.. The rules for identifiers in C# will not accomodate the sequences of characters that are allowed in JSON..

After using the tool for some time, adapting it for the web seemed like a natural progression to increase value and extend its use to the greater development community.. To translate this data structure to a static language like C#, the schema must be flattened into types that can handle the most generic case.. For example, < "0" : "foobar" >is completely valid JSON, but a C# property with identifier "0" will not compile. b0d43de27c [TuneRanger For Windows download free for windows 8 32bit last version](#)
